#### SURFACE TRANSPORTATION BOARD

#### Decision

STB Ex Parte No. 290 (Sub-No. 5) (2000-3)

### QUARTERLY RAIL COST ADJUSTMENT FACTOR

Decided: June 19, 2000

In <u>Railroad Cost Recovery Procedures</u>, 1 I.C.C.2d 207 (1984), the Interstate Commerce Commission (ICC) outlined the procedures for calculating the all-inclusive index of railroad input prices and the method for computing the rail cost adjustment factor (RCAF). Under the procedures, the Association of American Railroads (AAR) is required to calculate the index on a quarterly basis and submit it on the fifth day of the last month of each calendar quarter. In <u>Railroad Cost Recovery Procedures</u>, 5 I.C.C.2d 434 (1989), <u>aff'd sub nom. Edison Electric Institute</u>, et al. v. ICC, 969 F.2d 1221 (D.C. Cir. 1992), the ICC adopted procedures that require the adjustment of the quarterly index for a measure of productivity.

The provisions of 49 U.S.C. 10708, which were recently revised by the ICC Termination Act of 1995, Pub. L. No. 104-88, 109 Stat. 803, direct the Surface Transportation Board (Board) to continue to publish both an unadjusted RCAF and a productivity-adjusted RCAF. In Productivity Adjustment-Implementation, Ex Parte No. 290 (Sub-No. 7) (STB served Oct. 3, 1996), the Board decided to publish a second productivity-adjusted RCAF called the RCAF-5. Consequently, three indices are now filed with the Board: the RCAF (Unadjusted), the RCAF (Adjusted), and the RCAF-5. The RCAF (Adjusted), which reflects national average productivity changes as originally developed and applied by the ICC, is currently based on a 5-year moving average. The RCAF-5 reflects national average productivity changes as if a 5-year moving average had been applied consistently from the productivity adjustment's inception in 1989.

The index of railroad input prices, RCAF (Unadjusted), RCAF (Adjusted), and RCAF-5 for the third quarter 2000 are shown in Table A of the Appendix to this decision. Table B shows the first quarter 2000 index and the RCAF calculated on both an actual and a forecasted basis. The difference between the actual calculation and the forecasted calculation is the forecast error adjustment.

Both the RCAF (Adjusted) and the RCAF-5 are currently calculated using a moving 5-year average of productivity change for U.S. Class I railroads. An average productivity change rate of 1.035 (3.5% per year) for the period 1994-1998 is currently used for the RCAF

<sup>&</sup>lt;sup>1</sup> The RCAF provisions of former section 10707a were revised and redesignated as 49 U.S.C. 10708.

STB Ex Parte No. 290 (Sub-No. 5) (2000-3)

(Adjusted). In accordance with Ex Parte No. 290 (Sub-No. 7), <u>supra</u>, the RCAF-5 will continue to use the 1993-1997 average productivity change rate of 1.057 (5.7%) until January 1, 2001.

We have examined AAR's calculations for compliance with our procedures and find that the third quarter 2000 RCAF (Unadjusted) is 1.050, the same as the second quarter 2000 RCAF of 1.050. The RCAF (Adjusted) is 0.588, a decrease of 0.8% from the second quarter 2000 RCAF (Adjusted) of 0.593. The RCAF-5 is 0.569, a decrease of 1.4% from the second quarter 2000 RCAF-5 of 0.577.

This decision will not significantly affect the quality of the human environment or the conservation of energy resources.

Pursuant to 5 U.S.C. 605(b), we conclude that our action will not have a significant economic impact on a substantial number of small entities within the meaning of the Regulatory Flexibility Act.

AUTHORITY: 49 U.S.C. 10708.

## It is ordered:

- 1. The Board has approved the third quarter 2000 Rail Cost Adjustment Factor (Unadjusted) of 1.050, RCAF (Adjusted) of 0.588, and RCAF-5 of 0.569.
  - 2. Notice of this decision will be published in the <u>Federal Register</u>.
  - 3. The effective date of this decision is July 1, 2000.

By the Board, Chairman Morgan, Vice Chairman Burkes, and Commissioner Clyburn.

Vernon A. Williams Secretary

# TABLE A Ex Parte No. 290 (Sub-No. 5) (2000-3) All Inclusive Index of Railroad Input Costs

Line No.	INDEX COMPONENT	1998 Weights	SECOND QUARTER 2000 FORECAST	THIRD QUARTER 2000 FORECAST
1	Labor	39.9%	242.8	245.7
2	FUEL	7.0%	102.6	98.7
3	MATERIALS AND SUPPLIES	5.5%	146.5	147.6
4	EQUIPMENT RENTS	10.8%	174.5	175.0
5	Depreciation	10.6%	149.8	150.2
6	Interest	4.8%	98.0	98.0
7	Other Items <sup>1</sup>	21.4%	159.9	161.3
8	Weighted Average	100.0%	185.8	187.1
9	LINKED INDEX <sup>2</sup>		180.3	181.6
10	PRELIMINARY RAIL COST ADJUSTMENT FACTOR 3		104.1	104.8
11	Forecast Error Adjustment⁴		0.009	0.002
12	RCAF (UNADJUSTED) (LINE 10 + LINE 11)		1.050	1.050
13	RCAF (Adjusted) <sup>5</sup>		0.593	0.588
14	RCAF-5 <sup>6</sup>		0.577	0.569

<sup>&</sup>lt;sup>1</sup> "Other Items" is a combination of Purchased Services, Casualties and Insurance, General and Administrative, Other Taxes, Loss and Damage, and Special Charges, price changes for all of which are measured by the Producer Price Index for Industrial Commodities Less Fuel and Related Products and Power.

<sup>&</sup>lt;sup>2</sup> Linking is necessitated by a change to the 1998 weights beginning with the fourth quarter 1999. The following formula was used for the current quarter's index:

The first quarter 1998 RCAF was rebased using the October 1, 1997, level of 173.2 in accordance with the requirements of the Staggers Rail Act of 1980 (10/1/97 = 1.00).

<sup>&</sup>lt;sup>4</sup> The third quarter 2000 forecast error adjustment was calculated as follows: a. First quarter 2000 RCAF calculated using forecasted data equals 103.6; b. First quarter 2000 RCAF calculated using actual data equals 103.8; c. The difference equals the forecast error (b-a) of 0.2. Since the actual first quarter value is greater than the forecast, the difference is added to the preliminary RCAF.

<sup>&</sup>lt;sup>5</sup> The third quarter 2000 RCAF Adjusted (0.588) is calculated by dividing the third quarter 2000 RCAF Unadjusted (1.050) by the third quarter productivity adjustment factor of 1.7871. The third quarter 2000 productivity adjustment factor is calculated by multiplying the second quarter 2000 productivity adjustment factor of 1.7719 by the fourth root (1.0086) of the 1994-1998 annual average productivity growth rate of 1.035%.

<sup>&</sup>lt;sup>6</sup> The third quarter 2000 RCAF-5 (0.569) is calculated by dividing the third quarter 2000 RCAF Unadjusted (1.050) by the third quarter productivity adjustment factor-5 (PAF-5) of 1.8468. The third quarter 2000 productivity adjustment factor is calculated by multiplying the second quarter 2000 PAF-5 of 1.8213 by the fourth root(1.0140) of the 1993-1997 annual average productivity growth rate of 1.057%.
